# Debomat Entrance Care

## Alubrush Indoor

The care and maintenance of Alubrush Indoor is essential for the durability and appearance of the mat. Soiling and general wear have a very negative impact on the appearance of the entrance mat and should be prevented by an effective cleaning program. A regular cleaning program prevents premature replacement of the entrance mat. Install an outdoor mat like the Super Scraper or Alubrush Outdoor with any outside entrance to decrease the soiling of the Alubrush Indoor. Avoid excessive use of cleaning products. If you do use them, wash them thoroughly, because any residue can attract dirt.

### **Regular cleaning**

#### ° Vacuuming

Regular vacuuming with a sufficiently powerful vacuum cleaner with a brush is essential to the mat to maintain it in perfect condition. Heavy traffic areas should be vacuumed more intensively than less traffic areas.

#### ° Stain removal

Stains should be removed immediately with neutral stain remover before the stain has the chance to dry. Chewing gum can be removed by means of ice solidified and then removed mechanically using a knife or scraper. Let it dry completely before it goes back vacuuming.
